ZITHA TECH SPECIALTY CABLES (Pty) Ltd

Cable trays with holes at the bottom

Overview

A perforated cable tray—also called a ventilated trough tray —features a solid bottom with regularly spaced ventilation holes and continuous side rails. Perforated type cable tray is ideal for cables which need both protection from external damage and good ventilation, it is available in various standard sizes and. Cable tray systems are engineered support structures designed to route, support, and protect insulated electrical cables used for power distribution, control, instrumentation, and communication. Think of it as a long, shallow channel for your cables. These holes let some air circulate. Our cable trays are produced in fit for purpose materials like stainless steel, galvanized, aluminium and fibreglass (FRP/GRP) composites to suit any project type both offshore and onshore.
