ZITHA TECH SPECIALTY CABLES (Pty) Ltd

Dimensions of an Eight-Meter Distribution Box

Overview

This document provides specifications for various distribution boxes including dimensions, mounting sizes, and number of ways.

Key Takeaways

An 8-meter distribution box is typically a large, custom or modular enclosure, with dimensions scaled proportionally to standard freestanding cabinets, often exceeding 7–8 meters in height or length depending on configuration.General Size Considerations

Distribution boxes are not universally standardized, and dimensions vary by manufacturer, type, and application. Standard freestanding electrical enclosures range from about 1.6–2.2 meters in height, 0.6–1.8 meters in width, and 0.3–0.6 meters in depth . For an 8-meter distribution box, the height or length is significantly larger, often achieved by modular stacking or custom fabrication to accommodate long cable runs, multiple circuits, or fiber distribution panels .

Typical Configuration
• Height/Length: Approximately 8 meters (custom or modular sections combined)

• Width: Usually 0.6–1.8 meters per module, depending on internal layout and number of circuits

• Depth: Typically 0.3–0.6 meters, allowing sufficient space for wiring, bend radius, and safety clearances

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

• Material: Fire-resistant ABS, steel, or aluminum for durability and safety

• Protection Rating: Often IP40–IP66 for indoor or outdoor use, with waterproof covers for fiber or outdoor installations

Installation and Design Notes

• Modular Design: Large distribution boxes are often modular, allowing multiple sections to be connected to reach 8 meters in total length or height.

• Cable Management: Adequate space for neutral and earth bars, cable entry, and internal wiring is critical to maintain safety and accessibility .

• Mounting Options: Can be wall-mounted for smaller sections or floor-standing for full 8-meter assemblies. Outdoor units may include weatherproof covers and UV-resistant materials .

• Internal Layout: Must account for circuit breakers, bus bars, fiber adapters, or other components, with spacing to prevent overheating and allow maintenance .

Summary

An 8-meter distribution box is generally a custom or modular freestanding enclosure with a height or length of 8 meters, width between 0.6–1.8 meters, and depth of 0.3–0.6 meters. The exact dimensions depend on the number of circuits, type of distribution (electrical or fiber), and manufacturer specifications. Proper planning for internal layout, cable management, and protection rating is essential for safe and efficient operation .
