Do factory cable trays need to be grounded

Overview

It is also easier to do the cabletray grounding inspection if the tray system does not have cable installed.

Key Takeaways

Yes, all metallic cable trays must be grounded to ensure electrical safety, even if they are not used as an equipment grounding conductor (EGC).Why Cable Tray Grounding is Mandatory

All metallic cable trays are required to be grounded according to NEC Article 250.96 and similar international standards (IS, IEC) to prevent electrical hazards . Grounding provides a safe path for stray electrical currents, reducing the risk of electric shock, equipment damage, and fire hazards . Even if the tray itself is not serving as the EGC, grounding ensures that any fault current is safely diverted to the earth.

Methods of Grounding
• Separate EGC Conductor: A dedicated grounding conductor can be installed inside or attached to the tray, bonded at each section to maintain electrical continuity .

• Individual Cable EGCs: Multi-conductor cables with their own EGCs can be used, with bonding to the tray recommended for mechanical stability .

• Tray as EGC: In some installations, the metallic tray itself can serve as the EGC if it meets NEC cross-sectional area requirements and is properly bonded at all splice points .
Best Practices
• Ensure all tray sections are mechanically tight and electrically continuous .

• Use insulated conductors in aluminum trays to prevent electrolytic corrosion, removing insulation only at bonding points .

• Verify grounding conductor sizing according to NEC tables to handle potential fault currents .

• Maintain low grounding resistance (ideally 4 ohms or less) for effective fault current diversion .
Safety Implications

Failure to properly ground cable trays can result in energized trays during faults, creating shock hazards, equipment malfunction, and fire risks . Proper grounding and bonding are essential for compliance, safety, and reliable operation of electrical systems. In summary, all metallic cable trays must be grounded, and the method chosen should ensure continuous electrical connection, mechanical stability, and compliance with applicable electrical codes .

This comprehensive guide delves into the complexities of cable tray grounding, offering in

Grounding Inspection of Steel and Aluminum Cable Tray Systems

Regardless of which type of equipment grounding system used, cable tray systems must be electrically continuous and effectively

Equipment Grounding Conductors for Cable Tray Systems

NEC Section 318-6(a) states that cable tray is not required to be mechanically continuous but it must be electrically continuous and

Grounding Requirements for Electrical Cables, Cable Trays, and

Cable trays include cable troughs, cable trays, and cable ladders, all of which must be grounded regardless of

grounding cable trays

Do Cable trays have to be grounded? It sounds like a dumb question but if a cable tray has no individual wires in it

How to Check if Your Cable Trays are Grounded and Safe

Learn how to verify the safety of your electrical systems with our guide on testing cable tray

Grounding Requirements for Electrical Cables, Cable Trays, and

Guidelines for grounding electrical cables, busbars, and cable trays in wiring projects, ensuring safety and compliance

Cable Tray Grounding: Power, Instrumentation, and Telecommunications

Cable tray systems that contain signal and communication circuits should be grounded and, in some situations, shielded from

Grounding Inspection of Steel and Aluminum Cable Tray Systems

For safety reasons, the grounding should be right before the wire is energized. This is true for cable tray, conduit, cable, or any

Grounding Inspection of Steel and Aluminum Cable Tray Systems

It is also easier to do the cabletray grounding inspection if the tray system does not have cable installed. Electrical grounding is

Grounding Inspection of Steel and Aluminum Cable Tray Systems

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

Steel and aluminum cable tray systems are excellent equipment grounding conductors if they are properly designed, specified,

Cable Trays and Reels – Is cable tray bonded or grounded?

The National Electric Code (NEC) does not require an EGC for data cables. Multi-conductor cables already include an EGC. Single

100+ Essential Questions Answered About Cable Trays: Design ...

Discover over 100 expert answers about cable trays, covering key topics like material selection, load capacity,

Cable Tray Grounding: Electrical and Non-Power Conductors

Grounding/ Earthing Cable Trays The ground network consists of all metal parts of a building connected together:

A Guide to Installing and Supporting Electrical Cable Trays

Yes, an electrical cable tray can serve as an EGC if it meets all bonding and grounding requirements

Grounding & Bonding Wire Mesh Cable Trays

However, while wire mesh trays offer mechanical and thermal advantages, proper grounding and bonding are critical

Cable Tray Grounding: Power, Instrumentation, and

The purpose of power grounding (Article 250) is to minimize the damage from wiring or equipment ground fault. Cable tray systems

A Guide to Installing and Supporting Electrical Cable Trays

Yes, an electrical cable tray can serve as an EGC if it meets all bonding and grounding requirements

Grounding & Bonding Wire Mesh Cable Trays

However, while wire mesh trays offer mechanical and thermal advantages, proper grounding and bonding are critical
