Does the fiber optic fusion splice box include accessories

Overview

Choose a Fiber Optic Dome Splice Enclosure with anywhere from 24 to 288 single fusion splice capacity.

Key Takeaways

Yes, fiber optic fusion splice kits typically include essential accessories such as cleavers, fiber strippers, carrying cases, and sometimes battery packs.

Included Accessories in Fusion Splicer Kits

Most fiber optic fusion splicer kits are designed to provide everything needed to perform splicing efficiently. Standard accessories often include:

• Fiber Cleavers: Precision tools for cutting fibers to the correct length for splicing .

• Fiber Strippers: Tools to remove the protective coating from fibers without damaging the glass core .

• Protective Carrying Cases: For safe storage and transport of the splicer and accessories .

• Battery Packs: Many kits include one or two batteries for extended field use .

• Fiber Holders and Pulling Eyes: Some kits provide additional tools to facilitate cable installation in tight or hard-to-reach areas .

These accessories ensure that technicians can perform single-mode, multi-mode, or ribbon fiber splicing immediately after unboxing, without needing additional tools .

Fiber Optic Splice Boxes and Modules

While the fusion splicer kit includes accessories for the splicing process, fiber optic splice boxes themselves primarily serve as protective enclosures for the spliced fibers. They provide:

• Splice Protection: Housing for fusion or mechanical splices to prevent damage .

• Cable Management: Bend radius control, slack management, and organized routing of fibers .

• Labeling and Organization: Clear covers and logical layout for easy identification of splices .

Splice boxes generally do not include splicing tools like cleavers or strippers; these are part of the fusion splicer kit. However, some kits may combine the splicer and a compatible splice box for a complete solution .

Summary

In short, fiber optic fusion splice kits include essential accessories to perform splicing, while the splice box itself is mainly an enclosure for protecting and organizing the spliced fibers. For a complete setup, technicians typically use both the fusion splicer kit (with its accessories) and a splice box or module to house the finished splices.
