ZITHA TECH SPECIALTY CABLES (Pty) Ltd

Extinction Ratio Tester Calibration in Qatar

Overview

Calibration Services Qatar | ISO 17025 Calibration Laboratory Doha – Vertex Calibration is a Qatar-based ISO 17025 accredited laboratory offering reliable.

Key Takeaways

Calibration of an extinction ratio tester involves performing dark level calibration, vertical scale adjustment, and verification against traceable standards, which can be conducted at ISO/IEC 17025-accredited labs in Qatar.Understanding Extinction Ratio Calibration

The extinction ratio (ER) measures how efficiently a laser transmitter converts power into modulation, defined as the ratio of the average power for logic “1” to that for logic “0” . Accurate ER measurement requires minimizing offsets in the instrument electronics, particularly the dark level, which can artificially alter the one and zero levels. To calibrate:

• Dark Level Calibration: Perform this at the vertical scale intended for measurement to correct for electronic offsets .

• Vertical Scale Adjustment: Ensure the vertical scale is set correctly to avoid errors in ER readings.

• Eye Diagram Analysis: For NRZ signals, compute ER from the central 20% of the symbol period; for PAM4 signals, use the outer extinction ratio within the eye window boundaries .

• Filter Considerations: Use a low-pass filter with a fourth-order Bessel-Thomson (BT-4) response, with a 3 dB cutoff at 0.75 times the bit rate, to balance eye opening and minimize jitter .
Calibration Services in Qatar

Several ISO/IEC 17025-accredited laboratories in Qatar provide calibration services for optical and electrical instruments:

• Qatar Calibration Services (Q-Cal): Offers laboratory and on-site calibration for electrical, temperature, pressure, and optical instrumentation. They are accredited under ISO/IEC 17025 and provide traceable calibration for high-precision instruments .

• Aries Calibration Lab: Provides calibration for a wide range of instruments, including electrical and optical devices, with traceability to international standards and ISO/IEC 17025 accreditation .

• Both labs can perform dark level and extinction ratio verification for optical testers, ensuring compliance with international standards and manufacturer specifications.
Practical Recommendations
• Always perform dark level calibration before measuring ER to reduce offset errors.

• Use the same vertical scale for calibration and measurement to maintain accuracy.

• Ensure the calibration lab provides traceable standards and documentation for quality assurance.

• For critical applications, request NIST-traceable calibration to ensure international compliance . By following these procedures and using accredited calibration services in Qatar, you can maintain accurate and reliable extinction ratio measurements for optical transmitters.
