Features of Uruguayan Fiberglass Cable Trays

Overview

Fiberglass Cable Tray Our Fiberglass Cable Tray gives you the load capacity of steel, plus the inherent characteristics afforded by Pultrusion Technology.

Key Takeaways

Fiberglass cable trays in Uruguay offer high corrosion resistance, lightweight strength, non-conductivity, and versatile designs suitable for industrial and harsh environments.Material and Construction

Uruguayan fiberglass cable trays are typically made from fiber-reinforced polyester or vinyl ester resins, forming a strong composite material that is lightweight yet stronger than steel by weight . They are non-conductive, non-magnetic, and corrosion-resistant, making them ideal for environments exposed to chemicals, moisture, or saltwater . The pultrusion process ensures a resin-rich surface for superior corrosion resistance and UV protection, extending the service life and reducing maintenance .

Types and Structural Designs
• Ladder Type: Consists of two side rails connected by transverse rungs, allowing excellent ventilation and heat dissipation. Suitable for power cables, large-diameter control cables, substations, and industrial plants. Rungs are typically spaced 150–300 mm apart, and the design allows easy installation and modification .

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

• Trough or Channel Type: Features a bottom plate with side rails, providing better protection for sensitive cables like communication or instrumentation lines while still allowing some ventilation .
Performance and Safety Features
• Flame Retardant: Meets ASTM E-84 Class 1 and ASTM D-635 self-extinguishing standards .

• Impact and Chemical Resistance: Resistant to mechanical impact, chemicals, and UV exposure, making them suitable for offshore platforms, chemical plants, refineries, and water treatment facilities .

• Lightweight and Easy Installation: Weighs about one-third of steel trays, reducing transportation costs and installation hazards .

• Non-Interfering with Signals: Transparent to radio waves, radar, and microwaves, which is beneficial for sensitive instrumentation .
Accessories and Customization

Fiberglass cable trays can be complemented with covers, bends, tees, reducers, brackets, and specialized fittings to accommodate complex routing and heavy cable loads . They are available in standard colors (gray for polyester, beige for vinyl ester) with custom colors on request .

Applications

These trays are widely used in industrial plants, offshore oil and gas platforms, laboratories, refineries, and water treatment plants, where durability, corrosion resistance, and safety are critical . Their adaptability and long service life make them a cost-effective solution for cable management in harsh environments. In summary, Uruguayan fiberglass cable trays combine strength, corrosion resistance, flame retardancy, and lightweight design with versatile structural options, making them suitable for a wide range of industrial and demanding applications.
