Fiber optic transmission equipment pigtails

Overview

Fiber optic pigtails are cables with one end terminated with an optical connector, commonly used with fiber management equipment such as ODF, fiber splice closures, and fiber access terminals (FAT). Available in single mode and multimode, our fiber pigtails come in SC, LC, FC . Fiber pigtails are simple in appearance, yet essential in function. Get the wrong connector type, the wrong polish, or skip proper fusion splicing technique—and you're looking at elevated signal loss, increased back reflection, and a. A fiber optic pigtail is a short optical fiber cable that has a connector on one end and an exposed (unterminated) fiber on the other. The connector end plugs into devices like transceivers or patch panels, while the bare end is typically fusion spliced to a fiber optic cable. Solutions are available for both standard commercial networks and demanding environments.
