ZITHA TECH SPECIALTY CABLES (Pty) Ltd

Fiji Huawei Optical Module System

Overview

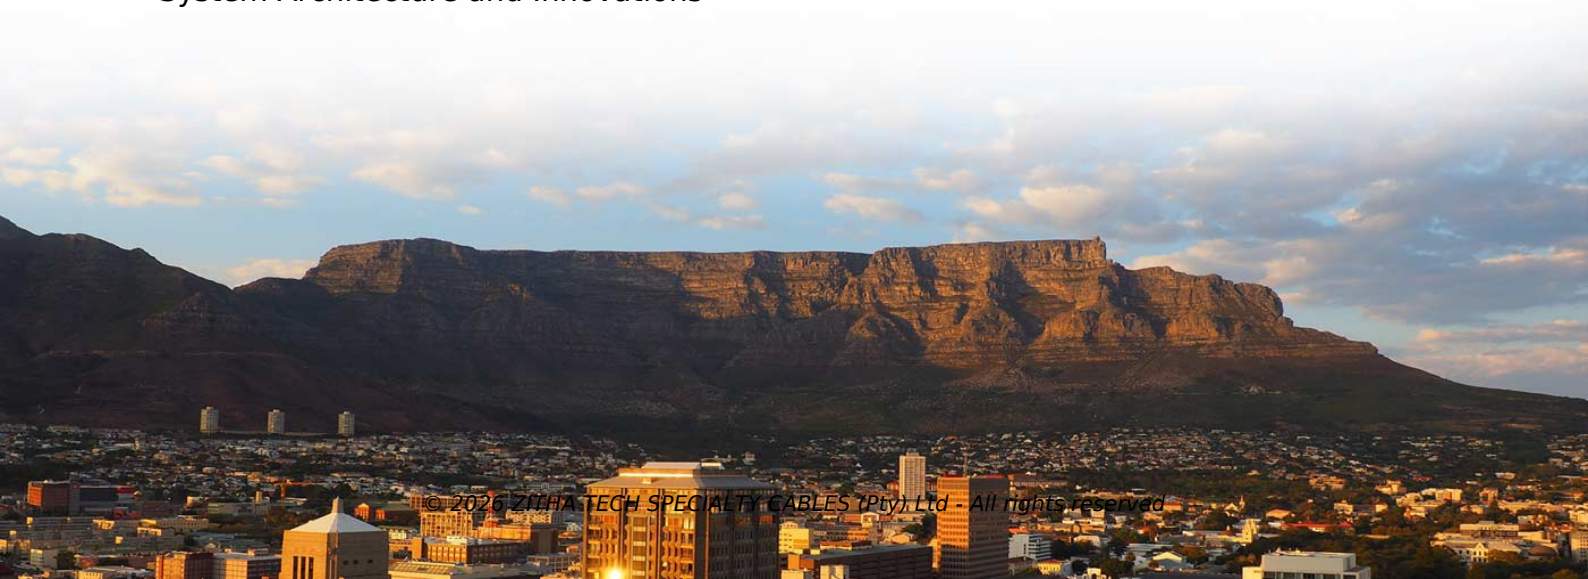

According to the details, Huawei issued the latest optical module patent with the publication number CN117767976A.

Key Takeaways

The Fiji Huawei Optical Module System is a high-performance optical interconnect solution designed for data centers, AI computing clusters, and enterprise optical networks, offering ultra-high bandwidth, reliability, and intelligent management.Overview of Huawei Optical Modules

Huawei optical modules are photoelectric converters that transform electrical signals into optical signals and vice versa, operating at the physical layer of the OSI model. They consist of optical transmitters and receivers, functional circuits, and optical bores, enabling high-speed data transmission over fiber-optic networks. Modules are designed for plug-and-play flexibility, supporting a wide range of interfaces and bit rates from GE to 800GE, ensuring stable and secure data center interconnectivity (Spanning, Stable, Secure) in AI and enterprise environments .

System Architecture and Innovations

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

The Fiji system leverages fully peer-to-peer optical interconnection architecture, replacing traditional copper connections with optical cables. This architecture is applied in Ascend AI supercomputing clusters, interconnecting hundreds of AI and CPU chips to achieve high throughput and low latency. Huawei integrates optical chips, Thin Film Lithium Niobate (TFLN) modulators, and intelligent compensation algorithms to dynamically manage fiber dispersion and nonlinear effects, supporting long-distance transmission up to 600G per wavelength and single-fiber capacities reaching 96Tbps .

Applications in Networks

Huawei's optical modules are deployed across multiple network scenarios:

• Data Center Interconnect (DCI): Provides ultra-broadband, simplified, and intelligent interconnects between data centers, ensuring high reliability and low latency .

• OptiX Networks: Extends optical connectivity to homes, campuses, and enterprises, supporting F5G-A technologies, smart campus networks, and ultra-gigabit Wi-Fi 7 experiences .

• Enterprise and WAN Networks: Uses hard-pipe technologies like fgOTN for secure, high-speed, and energy-efficient optical communication, enabling digital office and smart industry applications .

Key Features

• High Bandwidth: Supports single-wavelength rates from 100G to 1.2Tbps, with spectrum efficiency up to 8bit/s/Hz .

• Reliability and Security: Includes contamination detection, channel loss resistance, and ultra-high reliability for long-term stable operation .

• Energy Efficiency: TFLN modulators reduce power consumption by up to 30% compared to traditional modulators .

• Intelligent Management: AI-driven algorithms optimize optical network performance and enable autonomous operation, integrating with Huawei's CANN software ecosystem .

Integration and Compatibility

Huawei optical modules are compatible with CloudEngine series switches and other Huawei networking equipment, supporting seamless interconnectivity across data centers and enterprise networks. They are designed to be interoperable, with strict performance specifications to prevent communication failures between different modules .

Conclusion

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

The Fiji Huawei Optical Module System represents a cutting-edge optical interconnect solution that combines high-speed transmission, intelligent management, and robust reliability. It is suitable for AI data centers, enterprise networks, and smart campus deployments, enabling scalable, energy-efficient, and secure optical communication infrastructure .
