ZITHA TECH SPECIALTY CABLES (Pty) Ltd

High-precision installation solution for Italian optical cable take-up and lay-out frames

Overview

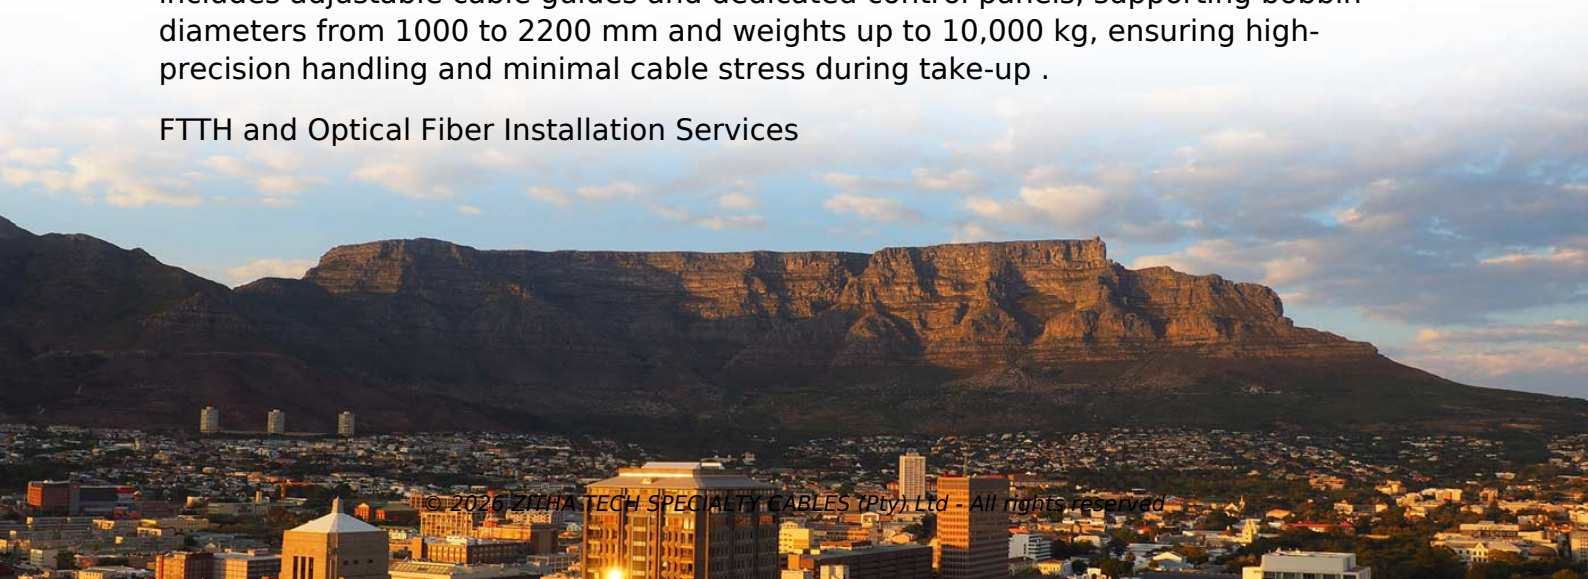

Since 2008 we design and build optical fiber plants and infrastructures for all the main Italian telecommunications operators.

Key Takeaways

For high-precision optical cable installation in Italy, portal-type servo-controlled take-up machines and specialized FTTH installation services provide accurate, efficient, and customizable solutions.Portal Take-Up Machines

Expometals offers portal-type take-up systems designed for precise winding of optical cables. These machines are self-traversing on rails using servo motors, with reversing positions controlled by encoders and protected by limit switches. Bobbins are clamped by tailstocks that can move independently, and winding can be controlled by either pull or speed, accommodating a wide range of cable types. The system includes adjustable cable guides and dedicated control panels, supporting bobbin diameters from 1000 to 2200 mm and weights up to 10,000 kg, ensuring high-precision handling and minimal cable stress during take-up .

FTTH and Optical Fiber Installation Services

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

Pagliaccia srl provides comprehensive FTTH (Fiber to the Home) installation services, including design, laying, and connection of optical fibers. Their approach emphasizes stability, speed, and efficiency, with operations analyzed and planned to meet specific customer requirements. They handle all phases from excavation to cable laying using mini-pipes, ensuring precision and reliability in network deployment . Fibernet also offers specialized blowing machines for FTTH secondary networks, which simplify and accelerate cable installation while maintaining high accuracy .

Custom Optical Cable Solutions

Tecnikabel manufactures high-quality optical cables tailored for demanding applications. Their cables are engineered for durability, safety, and operational continuity, suitable for industrial, marine, and critical infrastructure environments. They provide customized solutions that integrate with high-precision take-up and lay-out frames, ensuring compatibility with automated or servo-controlled systems .

Integration and Engineering Support

For projects requiring mechanical and optical integration, companies like Tecnottica Consonni offer optical CAD design, prototyping, and assembly services. They provide support for integrating optical elements with mechanical systems, including high-precision assembly of lenses and optical components, which can complement optical cable deployment in complex installations .

Summary

For high-precision optical cable take-up and lay-out in Italy, the recommended approach combines:

• Servo-controlled portal take-up machines for precise winding and handling (Expometals)

• Professional FTTH installation services for accurate deployment (Pagliaccia srl, Fibernet)

• Custom high-performance optical cables compatible with automated systems (Tecnikabel)

• Engineering and prototyping support for integration with mechanical and optical systems (Tecnottica Consonni) This combination ensures accuracy, efficiency, and reliability in optical cable installation projects, from industrial networks to FTTH deployments.
