High-voltage distribution box under transformer

Overview

A box type transformer is a compact outdoor power distribution unit that combines transformer, HV/LV switchgear, and protection systems in one enclosure. It's widely used in residential, commercial, and temporary grid installations for easy deployment and safe, efficient power. An electrical transformer box is a protective, enclosed unit containing a distribution transformer, which steps down high-voltage electricity to lower, usable voltages for homes and businesses. Box-type substations find applications in mining. - For surface-mounted distribution boxes on the wall, the indoor ceiling, wall, and decoration should be completed before installation; for flush-mounted control (distribution) boxes, the reserved holes, and conduits for power and lighting wiring should be inspected and qualified.
