How to unplug the broadband fiber optic cable

Overview

How to Upplug the Fibre Optic Cable from Bell''s jack? How does one unplug the Fibre Optic Cable from Bell''s jack?

Key Takeaways

To safely unplug a fiber optic cable, power down your modem, identify the connector type, and gently release it using the proper mechanism while avoiding bending or twisting the cable.Step-by-Step Instructions

1. Power Down Devices Before handling the fiber optic cable, turn off your modem, ONT, or fiber gateway and unplug it from the electrical outlet. This prevents exposure to infrared light and protects internal electronics from damage . 2. Clear Your Workspace Ensure the area around your modem is clean and free of dust or debris. Even microscopic particles can damage the delicate glass fiber tip . 3. Identify the Connector Type Common residential fiber connectors include:

• SC (Subscriber Connector): Square-shaped, uses a push-pull mechanism with a plastic locking tab .

• LC (Lucent Connector): Smaller, clip or latch mechanism, similar to a miniature Ethernet plug .

• ST and FC connectors: Less common, may require twisting or specific release methods . Knowing the connector type helps you release it correctly without applying excessive force. 4. Stabilize the Modem Hold the modem or ONT steady with one hand to prevent it from moving while you disconnect the cable. This avoids stress on internal components . 5. Release the Connector

• For SC connectors, depress the locking tab and gently pull the connector straight out along its axis.

• For LC connectors, squeeze the latch and pull the connector straight out.

• Avoid twisting, bending, or pulling the cable itself, as this can damage the internal glass fibers . 6. Cap the Connector After removal, place protective caps on both the cable end and the modem port to prevent contamination and dust ingress . 7. Inspect and Test If you plan to reconnect the cable later, inspect the connector for dirt or damage. Clean if necessary and test the connection to ensure proper signal transmission . 8. Seek Professional Help if Needed If the connector is stuck, damaged, or recessed, contact your ISP or a certified technician to avoid breaking the cable or port . By following these steps carefully, you can safely unplug a fiber optic cable without damaging the delicate fibers or compromising your broadband connection.
