Huawei Composite Fiber Switch Configuration

Overview

In this video, we'll guide you through the process of configuring a Huawei Switch for your network. Whether you're setting up a new switch or optimizing your existing network infrastructure, this step-by-step tutorial will help you get the job done efficiently. The Switch connects to the Internet through the combo interface GE 1/0/4. This document is for switches running V200R003C00 and later. You can run the display version command in the user view to check. Switch stacking is the process of combining multiple switches into a logical device that participates in data forwarding as a whole, in order to expand the number of ports, simplify networking, increase reliability, and extend the system's processing power and bandwidth. Huawei's stacking technology (e., iStack and CSS) allows multiple physical switches to operate as a single logical device. "Campus Networks Typical Configuration Examples" provides typical campus network networking modes and a variety of deployment examples.
