List of items for fiber optic pigtail sleeves

Overview

Leviton fiber optic pigtail kits are a good solution for mechanical or fusion splicing applications.

Key Takeaways

Fiber optic pigtail sleeves are protective tubes used to safeguard fusion or mechanical splices, available in various types, sizes, and materials to ensure long-term network reliability.Types of Fiber Optic Pigtail Sleeves
• Standard Single-Fiber Splice Sleeves
• Designed for protecting a single fiber splice.

• Typically include an outer heat-shrink tube, inner hot-melt adhesive layer, and a steel or ceramic strength member for mechanical support and environmental protection .

• Mini Splice Sleeves
• Smaller in size for compact installations.

• Ideal for high-density splice trays or limited space applications .

• Ribbon Fiber Splice Sleeves
• Designed for multi-fiber ribbon splices, commonly 4, 8, or 12 fibers.

• Provide simultaneous protection for all fibers in the ribbon .

• Dual Fiber or Multi-Fiber Splice Sleeves
• Protect two or more individual fibers in a single sleeve.

• Often used in backbone or FTTH deployments where multiple fibers are spliced together .

Materials and Components
• Outer Heat-Shrink Tube: Made from high-quality polyolefin, shrinks uniformly when heated to encapsulate the splice.

• Inner Hot-Melt Adhesive Layer: Bonds the fiber and sleeve components, providing environmental sealing.

• Strength Member: Stainless steel or ceramic rod to maintain fiber alignment and prevent bending or breakage .
Common Specifications
• Lengths: 40 mm, 50 mm, 60 mm, or custom lengths depending on fiber type and splicing equipment .

• Fiber Compatibility: Typically supports fibers with outer diameters up to 900 µm.

• Package Quantities: Often sold in packs of 25 or 50 sleeves, sometimes included with splice-ready connectors .

• Applications: FTTH, FTTx, backbone networks, and field installations .
Usage Notes
• Sleeves must be slid onto the fiber before splicing.

• After fusion splicing, the sleeve is positioned over the splice and heated in a sleeve oven or fusion splicer heater to shrink and bond the components .

• Proper heating ensures uniform shrinkage, mechanical rigidity, and environmental protection. Improper heating can lead to poor protection or sleeve damage .
Notable Manufacturers and Suppliers
• Thorlabs: Offers splice protector sleeves in 40 mm and 60 mm lengths for single-mode fibers, compatible with splice-ready connectors .

• AFL/Fujikura: Provides FP-03 series for single fibers, FP-04/05 for 8/12 fiber ribbons, and micro sleeves for compact optical components .

• ME Fiber Optic: Supplies heat-shrinkable polyolefin sleeves with steel rods for robust protection .

• Leviton: Offers pigtail kits with sleeves for mechanical or fusion splicing, available in multimode and single-mode fibers . Fiber optic pigtail sleeves are essential for ensuring splice durability, preventing signal loss, and protecting against environmental factors, making them a critical component in any fiber optic deployment.
