Network rack aviation connector

Overview

Brush rack and panel connector series utilizes Amphenol''s durable and reliable B3 contact system in a rugged, non-floating Rack and Panel connector.

Key Takeaways

ARINC 600 connectors are the standard rectangular rack-and-panel connectors for aircraft avionics. They link avionics line-replaceable units (LRUs), such as flight computers and navigation modules, to the aircraft wiring harness. They have the options of signal, power, RF (Coax, Twinax, Triax) Quadrax, and fiber optic contacts depending on the series chosen. Included in this series are digital and power/digital “hybrid” insert arrangements. This article highlights six key connector families used in aerospace and their. Recognized as a specialist for rectangular Rack & Panel connectors for both military and civil applications, Radiall offers the most comprehensive range of Arinc 600 (NSX), Arinc 404 / AS-81659 (DSX) and MIL-DTL-83527 (MPX) connector series that include high speed, cost effective and RoHS. The ARINC 404 rack and panel series are multipin rectangular connectors used to electrically interface avionics equipment to equipment rack. The mated locking mechanism is provided for the equipment and.
