Power disconnection tools for high-voltage distribution boxes

Overview

An HV disconnector switch, also known as an isolator switch, is a mechanical switching device used in high-voltage electrical circuits to provide a visible, physical isolation point. Its primary purpose is to completely de-energize a section of a circuit for safe maintenance . Pre-engineered solution set that digitizes XD|GE primary equipment and provides factory installed and configured protection, monitoring, diagnostics and communications. For over a century, utilities have relied on GE to deliver electrical products and services to meet their reliability and. As one of the world's leading manufacturers of HV disconnecting switches, SDCEM offers a wide range of HV/MV equipment, disconnectors, load break switches with operating mechanisms (motor or manual drives) to meet all end-user needs with high performance equipment. Our high-voltage disconnectors and earthing switches combine state-of-the-art technology with the highest quality standards for a voltage range from 36 kV to 800 kV. The technology of our products sets international trends. We continuously ensure our high quality through optimized production. Our Excel|mate MSD series offers a solution for safely disconnecting the HV battery pack from the mains without tools and protecting it from short circuits using various fuses. High Voltage Battery Disconnect Unit (HV-BDU) and Battery Junction Box The.
