Practical Wiring of Fiber Optic Hybrid Cables

Overview

This full-color document provides design and critical process requirements and technical insight for cable and wire harness assemblies incorporating optical fiber, optical cable and hybrid wiring technology. It categorizes hybrid cables into three types based on their functionality: Type I (communication only), Type II (power. By combining optical fibers and copper conductors under a shared sheath, they carry communication and power simultaneously. Combining them in this manner makes installation easier, reduces cabling density, and provides a more stable infrastructure. During construction, onsite cable connection is required. SMPTE (the Society of Motion Picture and Television Engineers) is an internationally-recognized standards developing organization. Headquartered and incorporated in the United States of America, SMPTE has members in over 80 countries on six continents. SMPTE's Engineering Documents, including.
