Risk Points of Aerial Optical Cables

Overview

Most OFS cables have a maximum rated cable load (MRCL) of 600 pounds and care must be taken during installation to avoid over tensioning the cable. Also, minimum bend diameters are specified for both static and dynamic conditions. This tutorial on fiber optic safety is in two parts - construction and fiber installation. Yet, outdoors, they face temperature swings, moisture, UV exposure, rodents, and human interference. Protecting them is essential for long-term reliability. This guide covers how to. Introduction This Program provides supervision, employees and safety managers with general safety rules, task safety procedures and best techniques for installation of quality fiber optic cable systems (cable handling, splicing, pulling, terminating testing and trouble shooting tasks).
