Three types of fiber optic cable interconnection

Overview

The three primary types of fiber optic cable are single-mode fiber (SMF), multimode fiber (MMF), and plastic optical fiber (POF), each designed for specific applications based on distance, bandwidth, and cost considerations. Where copper twisted pairs tend to terminate with an RJ45 plug, fiber optic connectors come in all sorts of shapes and sizes, with all manner of different use cases in mind. An optical fiber connector is used to join optical. In the landscape of network infrastructure, three primary cable categories dominate connectivity: twisted-pair copper cables, coaxial cables, and fiber optic cables. Fiber optic connectors may look small. Instead, different applications require different fiber optic connector types to achieve the right balance of density, insertion loss, scalability, and long-term reliability.
