# ZITHA TECH SPECIALTY CABLES (Pty) Ltd

# What are the tools in the fiber optic toolbox called

## Overview

OSP Tool Kit | Jonard ToolsIt includes a rugged backpack and a variety of tools for multiple applications such as stripping, ringing, Fiber optic equipment.

## Key Takeaways

A fiber optic toolbox typically includes installation, splicing, testing, and cleaning tools essential for preparing, connecting, and maintaining fiber optic networks.Installation Tools

These tools are used to prepare fiber cables for termination or splicing:

• Cable Jacket Strippers: Remove the outer sheath of fiber cables without damaging the fibers inside .

• Buffer Tube Strippers: Strip tight or loose buffer coatings from individual fiber strands .

• Precision Fiber Cleavers: Produce flat, mirror-smooth end faces on fibers, critical for low-loss splicing .

• Kevlar Cutters and Heavy-Duty Shears: Cut aramid yarn and cable jackets safely . Splicing and Termination Tools

These tools ensure precise fiber connections:

© 2026 ZITHA TECH SPECIALTY CABLES (Pty) Ltd - All rights reserved

• Fusion Splicers: Align and fuse fiber ends using an electric arc, available in core-alignment and cladding-alignment models .

• Splice Sleeves and Sleeve Heaters: Protect and reinforce fusion splices .

• Mechanical Splice Kits: Provide temporary or semi-permanent fiber connections.
Testing Tools

Used to verify signal quality and locate faults:

• Optical Time-Domain Reflectometers (OTDRs): Pinpoint faults, breaks, and splices along a fiber link .

• Optical Power Meters and Light Sources: Measure signal strength and insertion loss .

• Visual Fault Locators (VFLs): Identify breaks or bends in fiber using visible light .
Cleaning and Inspection Tools

Maintaining clean fiber end faces is critical:

• One-Click Cleaners, Lint-Free Wipes, and Isopropyl Alcohol Pens: Remove dust and contaminants from connectors .

• Inspection Scopes: Check fiber end faces for dirt, scratches, or defects .
Additional Tools
• Fiber Strippers: Remove coatings layer by layer without damaging the glass core .

• Non-Intrusive Identifiers: Detect signal direction and live traffic on fibers .

• Labeling Tools: For cable identification and organization. These tools collectively form the fiber optic toolbox, enabling technicians to perform clean, precise, and reliable fiber installations, splices, and maintenance across telecommunications, data centers, and industrial networks .
