X-ray fluorescence spectrometer GNR

Overview

An outstanding spectrometer that allows to perform Energy Dispersive X-Ray Fluorescence Analysis in Total Reflection Geometry.

Key Takeaways

GNR X-ray fluorescence (XRF) spectrometers are high-precision instruments for non-destructive elemental analysis, offering both energy-dispersive (ED-XRF) and total reflection (TXRF) configurations for ultra-trace to major-element quantification.Principles of Operation

GNR XRF spectrometers operate on the principle that atoms emit characteristic X-ray photons when returning to their ground state after excitation. Energy-dispersive XRF (ED-XRF) uses a ~45° incidence angle of the primary X-ray beam, suitable for general elemental analysis of powders, solids, and liquids, while Total Reflection XRF (TXRF) employs a grazing incidence angle below the critical angle (
